IMPLANTINSPECTOR

Flexible inspection system for dental implants

ImplantInspector verifies that your products are manufactured according to specification. It gives you control over material costs, minimizes product returns and optimizes your production.

We are specialized in delivering innovative and high qualitative machines adapted to your needs.

ImplantInspector

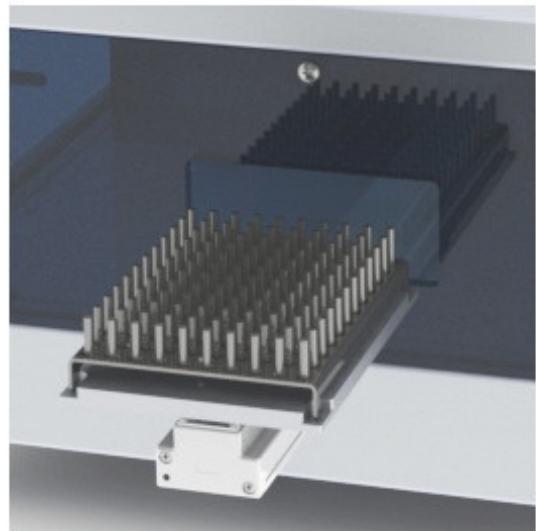

Benefits

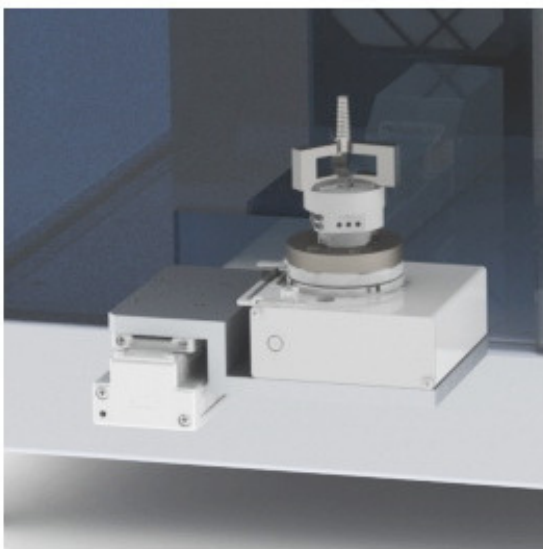

- Cosmetic inspection
- Adaptable to your needs
- Reliable and Fast system
- Fully automated
- Effective and detailed vision inspection by means of robot motion
- Keeps a real-time record of your quality level for documentation
- Different Add-On options
- Easy maintenance

How does it work?

We will help you with the set up and the installation and provide you with all the knowledge and information you need. From that moment on, the ImplantInspector will inspect your product. The product/ palette containing the products is loaded manually or by robot into the Inspector. The ImplantInspector moves the product into the system, where the product will be inspected. The result of the inspection is presented on the screen and the product will be removed from the system.
